STAY HOME

TO PROTECT FAMILIES AGAINST COVID-19

Everyone should stay at home, except to do the following:

TO GET MEDICAL CARE - Call ahead, then send only one person.

TO GET PRESCRIPTIONS - Go alone or send only one person.

TO SHOP FOR FOOD - Have a plan and only send one person.

TO CHECK ON FAMILY - Call, or send one person if needed.

STAYING HOME SLOWS THE SPREAD OF CORONAVIRUS (COVID-19)

JOHNS HOPKINS CENTER FOR AMERICAN INDIAN HEALTH
What is coronavirus disease 2019 (COVID-19)?
Coronaviruses are a type of virus (germ) that can cause cold-like symptoms and sometimes serious problems with lungs and breathing. COVID-19 is a novel (new) coronavirus.

What are the symptoms of COVID-19?
Mild to severe respiratory illness, or problems with lungs and breathing. Symptoms include:
- Fever, cough, and shortness of breath

How does COVID-19 spread?
Person to person by coughing, sneezing, or personal contact like touching or shaking hands. Someone with mild symptoms may spread the disease without knowing they are sick.

Who is most at risk?
Anyone can get COVID-19. Those at risk of severe illness include:
- Elders and adults over 60 years of age,
- People with heart disease, lung disease, or diabetes.

How can I protect myself and my family?
Stay at home. "Social distancing" is recommended. This means keeping your family at home and away from others who may be sick.
- If you must go out, try to stay 6 feet away from others.
- Avoid gatherings with other people.
- Avoid touching your eyes, nose, and mouth.
- Do not shake hands, hug, or touch others.
- Wash your hands often with soap and water for at least 20 seconds or use hand sanitizer.

Have there been cases of COVID-19 in our state?
Yes, there have been cases in all 50 states.

If someone gets sick, what can they do?
- If someone thinks they have been around someone with COVID-19 and they get a fever and symptoms such as cough or trouble breathing, they should call their healthcare provider or local Indian Health Service unit for medical advice.
- In an emergency, call 911.
- People who are mildly sick with COVID-19 do not need to see a healthcare provider and are able to recover at home.
- Cover coughs and sneezes with a tissue, then throw the tissue in the trash and wash hands.
- Stay home and away from others for 14 days to avoid getting others sick.
- Caregivers should keep sick family members away from others in the home and clean and disinfect surfaces and items that are touched often, like door handles, sink handles, toilets, remote controls, etc.

Is there a vaccine or treatment?
There is no vaccine. The best way to reduce the risk of getting sick with COVID-19 is to practice social distancing and healthy habits like washing hands regularly.
There is no specific treatment for COVID-19, but medical care can help relieve symptoms. If you are sick, call your healthcare provider for instructions.

ADDRESS THE RISK
The outbreak of coronavirus disease 2019 (COVID-19) may be stressful for elders. Older adults are particularly vulnerable to COVID-19 given their weaker immune systems, the higher COVID-19 mortality rate found in the older population, and their limited information sources. Providers should be aware of especially high-risk groups such as low-income elders, those living alone, and those suffering from other health conditions such as cognitive decline, dementia, or other mental health conditions.

MANAGE STRESS
- Share simple facts about the COVID-19 outbreak, including symptoms, treatment, and effective strategies to reduce risk of infection in words older people can understand. Consider whether they have cognitive impairments when speaking about risk.
- Communicate instructions in a clear, concise, and respectful way. Information may be displayed in writing or pictures.
- Engage families with information and help them practice prevention measures such as handwashing.
- Contact elders via landline phones.
- Encourage family or friends to call their elders regularly and teach elders how to use video (chat).

DEFINITIONS
Communities, families, and elders must take steps to protect elders:

What is Social Distancing?
Social distancing means remaining out of settings with large groups of people and maintaining distance (approximately 6 feet) from others when possible. People can practice social distancing while remaining connected to others through the phone and other forms of technology.

What is Isolation?
Isolation means the separation of a person or group of people known or reasonably believed to be infected with a communicable disease and potentially infectious, from those who are not infected, to prevent spread of the disease. Isolation for public health purposes may be voluntary or compelled by federal, state, or local public health order.

What is Quarantine?
Quarantine means the separation of a person or group of people reasonably believed to have been exposed to a communicable disease but not yet symptomatic. The person or group of people must be separated from others who have not been so exposed to prevent the possible spread of the disease.

Tips for Elders and Their Caregivers About COVID-19 (Coronavirus)

People of all ages with heart disease, lung disease, diabetes, or cancer are at higher risk of getting very sick from COVID-19, the new virus also known as coronavirus. In addition, older adults are at greater risk because as they get older, it’s harder for them to stay well.

Avoiding getting sick with COVID-19 is especially important for elders and people at higher risk.

How to keep Elders and others safe
(see other side of this page)

Stay at home. “Social distancing” is recommended. This means keeping your family at home and away from others as much as possible.

- Try to stay 6 feet away from others, especially when outside of the home.
- Avoid gatherings with other people. This may include family too. Gatherings should be less than 10 people.
- When leaving the home to get food and supplies, send only one person to do the shopping.
- Wash your hands often with soap and water for at least 20 seconds or use hand sanitizer.
- Avoid touching your eyes, nose, and mouth.
- Do not shake hands, hug, or touch others outside of your home.
- Sleep 7 to 9 hours a night to stay strong to fight sickness.
- Drink plenty of water and eat fruits and vegetables.
- Get outside for fresh air and exercise.
- Limit news and social media. Sometimes too much information causes anxiety and added stress.
- Clean and disinfect surfaces and items that are touched often, like door handles, sink handles, toilets, remote controls, phones, light switches, etc.

Activities to do with elders while staying safe

- Going outside for walking, gardening, hiking, stretching.
- Brain exercises and games like word searches, Sudoku, crossword puzzles.
- Relaxation, including breathing, meditation, praying.
- Reading books and magazines.
- Phone and video calls with family and friends.
- Listening to music.
- Finding ways to laugh.

What else should caregivers do?

The best protection for the people being cared for is for their caregivers to stay healthy. Caregivers should follow the guidelines to be safe and make sure others in the home are too, especially children and others who spend time with the elder.

Watch for symptoms (fever, cough, trouble breathing) in everyone in the home. Separate anyone who is sick from others.

Practice self-care. It can be hard for caregivers to take care of themselves as well as others, but self-care is important.

- Relax, take deep breaths, stretch, or pray.
- Take part in sacred practices.
- Do activities you enjoy.
- Talk with loved ones and friends, share feelings and experiences.
- Try to stay hopeful and thinking positively. Write down things you are grateful for or that are going well.

If you have concerns, get help

Call your healthcare provider or local Indian Health Service unit with any concerns.

Ask your healthcare provider or pharmacist if prescriptions can be filled for a greater number of days to reduce how often trips are needed to the pharmacy.

How to Prevent the Spread of Coronavirus (COVID-19) in the Home

Many people with coronavirus (COVID-19) or symptoms of COVID-19 like cold symptoms, cough, fever, or shortness of breath, are told to stay home to recover. If someone in your home is recovering, take steps to prevent spreading COVID-19 to others inside and outside the home.

Help with recovery
Help the sick person follow their healthcare provider’s instructions for medications and care.
If they are getting sicker, call their healthcare provider or local Indian Health Service unit for medical advice. If they have a medical emergency, call 911.

Keep the sick person away from others as much as possible

- **Stay home** and avoid having visitors.
- **Separate the sick person from others in** the home. If possible, have the sick person use a separate bedroom and bathroom that no one else uses.
- Prepare meals for them and have them eat in their own area.
- **Avoid sharing items** like dishes, eating utensils, towels, bedding, or other items. After the sick person uses the items, they should be handled with gloves and washed with hot water. Wash hands after removing gloves.
- Keep pets away. While the animals won’t get sick, they may carry it to other people on their fur, collar, etc.
- Make sure that shared spaces in the home have good air flow, such as by an air conditioner or an opened window.
- The sick person should wear a facemask around other people. If disposable ones are not available, have them wear a bandana or something else to cover their nose and mouth. When the mask or bandana gets moist or wet, it needs to be changed. The bandana can be washed and reused.
- Others can still talk, sing, play, etc. with the sick person from a safe distance (at least 6 feet) or by phone or video.

Healthy practices for everyone

Everyone in the home should wash hands often with soap and water for at least 20 seconds or use an alcohol-based hand sanitizer, covering all surfaces of your hands and rubbing them together until they feel dry.
They should also avoid touching eyes, nose, and mouth.

Clean and disinfect

- **Cleaning** removes dirt and germs with soap. Disinfecting kills germs with chemicals.
- **Clean and disinfect all “high-touch” surfaces**, such as counters, tables, doorknobs, light switches, faucet handles, toilets, phones, etc. multiple times each day.
- For disinfecting, use common household disinfectants like Lysol or Clorox, diluted household bleach solutions (4 teaspoons bleach per quart of water), or alcohol solutions with at least 70% alcohol.
- Gloves should be worn for cleaning, but they should only be used for cleaning surfaces for COVID-19. **Wash hands immediately after gloves are removed.**
- If a separate bathroom is not available for only the sick person to use, the bathroom should be disinfected after each use by a sick person.
- Wear gloves when you touch or have contact with the sick person’s body fluids, such as blood, saliva, mucus, or urine. Wash hands immediately afterwards.

Wash laundry thoroughly

- Immediately remove and wash clothes, towels, or bedding that have body fluids on them.
- Wear gloves while handling dirty items and keep them away from your body. If gloves are not available, wash hands immediately after putting items in the wash.
- Use a normal laundry detergent according to instructions and dry thoroughly using the warmest temperatures recommended on the clothing label.
- Clean and disinfect clothes hampers.

How to Care for Someone at Home During COVID-19 (Coronavirus)

Caring for someone at home

Most people who get sick with COVID-19 will have only mild illness and should recover at home. Mild illness might include fever and cough. Care at home can help stop the spread of COVID-19 and help protect people who are at risk for getting seriously ill from COVID-19.

At-home care may not be appropriate for elders and people of any age with certain serious medical conditions like lung disease, heart disease, or diabetes. These groups are at higher risk for developing more serious effects from COVID-19 and should contact their healthcare provider as soon as symptoms start.

If you are caring for someone at home, prevent the spread of germs, watch them for emergency signs, treat symptoms, and end care only after following appropriate guidelines.

Prevent the spread of germs

COVID-19 spreads person-to-person by coughing, sneezing, or personal contact like touching or shaking hands. Someone with mild symptoms may spread the disease without knowing they are sick. It is important for anyone showing even mild symptoms to stay inside and stay 6 feet away from others during their recovery.

- If possible, have the sick person use another bathroom.
- Avoid sharing items like towels, dishes, and bedding.
- Have them wear a facemask or bandana over the mouth and nose when around others in the home. If the mask or bandana gets moist or wet, change it. Bandanas or homemade masks can be washed and reused.
- Wash hands with soap or use hand sanitizer often, especially after interacting with the sick person.
- Avoid touching eyes, hands, and mouth.
- Multiple times per day, clean flat surfaces that droplets can land on, such as tabletops or countertops, and surfaces that are touched often, such as doorknobs. Use household cleaners and disinfectants, and wear gloves if available. If the sick person is using a shared bathroom, that should be cleaned and disinfected after each use by the sick person.
- If possible, keep windows open to increase air flow.
- Wash laundry thoroughly. Wash hands after handling clothes.
- Avoid having visitors.

Know the emergency warning signs

People who develop emergency warning signs for COVID-19 should call 911 and get medical attention immediately. Emergency warning signs include:

- Difficulty breathing or shortness of breath
- Constant pain or pressure in the chest
- Confusion or can't wake up
- Blue lips or face

Treating symptoms

There is no cure for COVID-19 at this time. To treat symptoms, the sick person should drink lots of water and rest. Contact a healthcare provider for advice. They may suggest taking over-the-counter drugs like Tylenol to help with symptoms.

Most people will have symptoms for a few days and recover after 1-2 weeks. Elders and those with serious medical conditions are at greater risk for severe symptoms that may last a long time. People in these groups should contact their healthcare provider as soon as they show symptoms.

Guidelines for ending care

Those who no longer have symptoms can restart normal activities under the following circumstances:

- If they do not have access to a coronavirus test:
  - They have had no fever for at least 72 hours AND other symptoms like coughing have improved AND at least 7 days have passed since their symptoms first appeared.
- If they do have access to a coronavirus test:
  - They have had no fever for at least 72 hours AND other symptoms like coughing have improved AND they received two negative tests in a row, 24 hours apart.
